

Management Information Systems Course – CIS351

Fall Semester 2021/2022

Assignment One:

Q : Assume you are responsible for adopting a new Information System (IS) in the business world. Study the following use case scenarios and build a conceptual business model that fulfills the requirements and standards or managerial and strategic frameworks.

- **Scenario One:**

King Abdullah University Hospital (KAUH) is planning to upgrade their ERP system for appointments reservations. Suppose the technical staff are not familiar with the requirements they must ask for. Help them create a system with the best functional and non-functional requirements.

- **Scenario Two:**

JUST Market is a grocery store that depends on paper-work for documenting sales and requests from vendors. The owner's son proposed shifting to using an information system to help his father be more organized. Assist them in creating a system that fits their needs.

- **Scenario Three:**

The CIS department in JUST asked the class of CIS351 to propose a suitable business model for documenting and organizing the registration system for CIS students. Help the department chose the best requirements for this system.

➤ **Notes:**

- ✓ Be creative.
- ✓ Trust Your Managerial point of view.
- ✓ Don't copy your friend's managerial point of view ;)

Good Luck

Zain ☺
